Professional Summary

- 2.4+ years of experience in analyzing, designing, and developing PEGA applications.
- Knowledge of case life cycle design, routing, correspondence, case approvals, child cases, data transforms, activities, flow, flow actions, SLAs, declare expressions, data pages, services, connectors, validations, report definitions, sections, and harnesses.
- Developed various flows, flow actions, data transforms, validations, activities, data pages, decision trees, decision tables, connect-REST, connect-SQL, service-REST, job schedulers, queue processors, access roles, access content policies, sections, skin, portals, and dashboards.
- Keen learner with constant zest to acquire new skills.

Professional Experience

- **Societe Generale Global Solution Centre** — July 2022 - Present
  Software Engineer — Hybrid
- **Societe Generale Global Solution Centre** — April 2022 - July 2022
  Intern — Remote
- **Virtusa Consulting Services Private Limited** — January 2022 - March 2022
  Intern — Remote

Projects

Project Name: FranFinance

Description:
- Financing the sale of capital goods for business and consumer credit for individuals.

Roles and Responsibilities:
- Analyzing and implementing the defects raised by the business.
- Involved in debugging tools like tracer and logs.
- Implemented report definitions, sections, job schedulers, queue processors, data transforms, validations, activities, and data pages.
- Analyzed the tables that consume huge memory in the database.

Project Name: Ramos

Description:
- Identifies and monitors the risk for the outsourced services.

Roles and Responsibilities:
- Analyzing and implementing the defects raised by the business.
- Involved in debugging tools like tracer and logs.
- Implemented sections, report definitions, validations, data pages, data transforms, job schedulers, and activities.
- Analyzed the tables that consume huge memory in the database.

Project Name: Circa

Description:
- Validation tool for FATCA certifications at the IRS.

Roles and Responsibility:
- Analyzing and proposing the solutions for the requirements provided by the business.
- Implementing the requirements provided by the business.
- Developed sections, report definitions, validations, data pages, data transforms, and activities.

Project Name: Volcker

Description:
- Mapping of trading activities and fund activities using the tool.

Roles and Responsibility:
- Analyzing and proposing the solution for the requirements provided by the business.
- Implementing the requirements provided by the business.
- Involved in debugging tools like tracer and logs.
- Developed data transforms, activities, flows, flow actions, sections, access roles, access control policies, data pages, declare expressions, and properties.
- Involved in Pega Predictive Diagnostic Cloud to eliminate the alerts.

Project Name: Claims Supervision

Description:

- Track high-valued claims for different countries. It is an application built using App Studio.

Roles and Responsibilities:

- Analyzing and proposing the solution for the requirements provided by the business.
- Implementing the requirements provided by the business.
- Involved in debugging tools like tracer and logs.
- Developed activities, application settings, DSS, flows, flow actions, job schedulers, data transforms, data types, properties, sections, report definitions, portals, dashboards, and widgets.
- Implemented end-to-end scenario test cases for the case types.

Project Name: SGADM

Description:

- Administrate the various operations.

Roles and Responsibilities:

- Analyzing and proposing the solution for the requirements provided by the business.
- Implementing the requirements provided by the business.
- Developed portals, pages, data transforms, access control policies, sections, report definitions, access roles, access control policies, and activities.

Project Name: Health Check

Description:

- A daily check on the success of agent execution, the status of production servers, the status of production-hosted applications, the status of global search, and the status of elastic search.

Roles and Responsibilities:

- Analyzing and implementing the requirements provided by the business.
- Developed data types, properties, data transforms, activities, data pages, correspondences, DSS, and job schedulers.

Project Name: Outage

Description:

- When there is an outage in the application or server, users are notified via the application.

Roles and Responsibilities:

- Analyzing and proposing the solution for the requirements provided by the business.
- Developed properties, data transforms, application settings, connect-REST, sections, decision tables, decision trees, and when conditions.
- Implemented unit test cases.

Project Name: E-Sign

Description:

- Users can provide e-signature for the documents.

Roles and Responsibilities:

- Analyzing and implementing the requirements provided by the business.
- Developed application settings, data transforms, data pages, connect-RESTs, and properties.
- Implemented unit test cases and test suites.

Project Name: Case Volume

Description:

- Retrieve the list of cases created. Send an alert if the total case count is mismatched. Send an alert if the cases created exceed the threshold.

Roles and Responsibilities:

- Analyzing and implementing the requirements provided by the business.
- Developed data types, activities, connect-SQLs, DSS, report definitions, application settings, data pages, data transforms, and classes.

Project Name: CREW

Description:

- Management of workflows for creating third-party legal entities, quality of existing third-party data, and subscription to support KYC.

Roles and Responsibilities:

- Analyzing, proposing, and implementing the requirements provided by the business.
- Developed data types, activities, connect-RESTs, report definitions, application settings, data pages, classes, data transforms, sections, job schedulers, queue processors, and skin.
- Implemented unit test cases.

Skills Summary

- **BPM** : Pega
- **Language** : Python
- **Database** : Oracle

Certifications

- Pega Certified System Architect (v8.4)
- Pega Certified Senior System Architect (v8.6)
- Completed Python Programming in NIIT.

Education

- **Bachelor of Engineering - Electronics and Communication Engineering** — CGPA: 8.83/10
  Rajalakshmi Engineering College, Chennai, Tamil Nadu — May 2022
- **Higher Secondary School Certificate** — Percentage: 90.41%
  Valluvar Gurukulam Higher Secondary School, Chennai, Tamil Nadu — May 2018
- **Secondary School Leaving Certification** — Percentage: 93.80%
  Zion Matriculation Higher Secondary School, Chennai, Tamil Nadu — May 2016

Accomplishments

- Pega Predictive Diagnostic Cloud foundation
- Pega Test Automation

Honors and Awards

- Spot Award for Commitment from Societe Generale Global Solution Center, December 2022
- The Heartfelt Hero Award for Amazing Coworker from Societe Generale Global Solution Center, September 2023

Language Known

- English - Professional Working Proficiency
- Tamil - Native Proficiency
- Hindi - Elementary Proficiency
